

4010 PEAS

HIGH QUALITY SPRING PEA

4010 Peas are a purple flower pea and can be planted in either spring or fall. Grows best in cooler climates. High-protein forage for grazing or haylage/baleage, but supplement with hay or plant in a mix with oats, spring triticale, or spring barley for added effective fiber and a slower rate of passage. Alone, the feed value is comparable to alfalfa haylage. Large leaves and excellent palatability.

Peas can do well on a variety of well-drained soils with approximately neutral pH. They prefer cool weather.

Cutting Management

If planted with a small grain, harvest when the grain is at boot stage for best quality. Otherwise, harvest at flowering. Pea grain can also be harvested and ground to replace protein like soybean meal.

Inoculate with **Pea/Vetch Inoculant** for best growth and nitrogen fixation.

At A Glance

- Spring forage pea, high tonnage and highly palatable
- Purple flower pea
- Ready for harvest in about 60 days
- Recommended in a mix with oats or spring barley or triticale to add effective fiber
- Grows best in cool weather
- Good dual purpose cover crop or forage

Best Uses

Haylage, baleage, grazing

Establishment

Seeding Rate: 80-100 lbs/A

Seeding Depth: 3/4" - 1", Large box

Seeding Dates: Early spring or late summer

Cool Season Annual
