

Bronson Tall Fescue

Bronson Tall Fescue exhibits the toughness that you have come to expect in a forage tall fescue, but with softer leaves than many varieties. Bronson withstands tough growing conditions that are common on most farms; drought, heat, and grazing are all handled well. Bronson can be fed with confidence to all animals. Bronson is a high yielding variety that is very palatable. Wisconsin grazing studies showed Bronson to be the most palatable tall fescue in their grazing trial at Lancaster.

BENEFITS

- Good feed value
- Tough & resilient
- Excellent digestibility
- Soft palatable leaves

Best Uses

- Exhibits high yield and toughness associated with tall fescue
- Persistent
- Soft, palatable leaves
- Best animal acceptance per Penn State University grazing trials

Establishment

Planting Dates: Early Fall

Seeding Rate:
20-25lbs/A straight

Seeding Depth: 1/4" into a well-prepared, firm seed bed.
