

CHOICE CHICORY

Choice chicory is a grazing and drought tolerant variety known for its high dry matter production, extended spring and fall growth, and its high mineral content. Seed fall through early spring with new seedings or as an interseeding.

Broadcast in the fall or mid-winter. Drag or find some way to incorporate seed after broadcasting. Can also be drilled. Minimize residue or grass competition to allow the chicory to establish.

- High in protein, low in fiber, high in minerals
- Drought tolerant, summer active forb
- Antiparasitic effects on ruminants

Establishment:

Seeding Rate: 2-4lbs/Acre

Depth: Surface - 1/4"

Target Harvest Height: 8"-10"
for grazing.

Target residual height for regrowth: 2.5"-3"
