

LEAFY T

HYBRID PEARL MILLET

Leafy T is known for its wide leaf characteristics. This dwarf variety has good disease resistance and seedling vigor.

Establishment

This small seed should be broadcast or drilled very shallow. Seed only when moisture is immediately available, shallow plantings are more susceptible to immediate temperature and moisture changes. Calibrate the spreader or drill for best results. If broadcasting, ensure that there is little residue in the way of the seed getting contact with the soil.

Harvest Management

Wait until forage reaches at least 18 inches to graze or cut. For best quality and yield, cut when height reaches 24-36 inches. Leave 6 inches of stubble when cutting for fastest re-growth. Condition with a crimper at a slight diagonal for speed drying. Wil to 60-68% moisture for a storage bunker or concrete stave silo, 55-65% for a sealed storage system.

Harvest Height

Grazing: 18-24 inches
Hay/Haylage: 36-40 inches
Greenchop: 36-40 inches

Key Features:

- No concern for prussic acid
- Can be grazed
- Good for late summer planting
- Good leaf to stem ratio
- Good forage quality

Establishment:

Seeding Rate: 15-25lbs/Acre
Seeding Dates: Early spring, or late summer.
Seeding Depth: 1/2"-1 1/2"

Best Use:

Haylage and greenchop
