

PARAMOUNT

RR ALFALFA

Paramount is a high forage yielding, excellent quality, Roundup Ready® alfalfa. It has a solid pest resistance package and salt tolerance to protect in a wide range of growing conditions. The Roundup Ready technology provides a wide range of weed control options to deliver weed free forage.

Management

- Nurse Crops: Spring seeded alfalfa can be planted with a small grain nurse crop such as oats, barley, or spring triticale. Use 1/3-1/2 seeding rates of the nurse crop to avoid over competing with new alfalfa. Ex. 1 bushel of oats as a nurse crop vs. a full rate of 3 bushels.
- Nurse Crops have little benefit to late summer/early fall seedings and are not recommended.
- Avoid pushing new alfalfa seedings too hard during the establishment year. 1-3 cuttings during the first year is acceptable, depending on growing conditions and region.

Establishment:

Seeding Rate: 18-22 lbs/A

Seeding Depth: Surface to 1/2"

Planting dates:

Fall, 4-6 weeks before first hard frost

Spring, after hard freeze conditions have passed.

Alfalfa should be drilled into a firm seedbed or broadcasted and packed.
