

# PREMIUM CLOVER BLEND

**MIX OF THREE BLOOMING CLOVERS FOR GRAZING, HAY, OR COVER CROP**

Premium Clover Blend is a blend of our best perennial clovers. Contains approximately 50% Red Clover, 25% White Clover, and 25% Ladino Clover. Great for frost-seeding, Interseeding pastures and thinning alfalfa fields. Can be used to complement many of our all-grass mixtures. Also works well as a perennial pollinator mix.

In a frost-seeding application, this blend can be used to improve a pasture or hayfield or as a relay cover or hay crop seeded into wheat. Be sure the ground is frozen and there is plenty of exposed soil. This is critical for good seed to soil contact.

This blend can be used for grazing, a cutting of hay, or simply as a cover crop for a season or two.

Soil pH should be 6.0-7.0, and adequate levels of calcium, phosphorus, and potash are critical before planting.

Best success if frost-seeded in early spring or planted in fall 8 weeks before the first killing frost.
