

SE SIGNATURE MIX

Diversity is gaining traction as producers look to improve soil/forage quality, and this mix is the answer. The bunch root systems of perennial grasses, nitrogen fixing clovers, and deep taproot/mineral scavenging ability of forbs feeds the soil. Novel endophyte tall fescue is safe for all classes of livestock, orchardgrass boosts forage quality, festulolium increases yield, and brome grass provides a palatable/strong winter forage. Red and white clovers will add grazing tolerance, and boost protein content. Chicory and plantain add high mineral forages and are persistent perennials. Small ruminant producers can improve grazing with the incorporation of forbs. This mixture will provide a buffet of quality forages for livestock to thrive on a more complete diet.

- 4 way grass mix with clovers and forbs!
- Nitrogen fixing red and white clovers!
- Diverse perennial mix great for small ruminants!
- Optimizing each forages strengths in one bag!

Drill to 0.25- 0.5" depth. Calibrate your drill to ensure an accurate seeding rate. Broadcast into a firm seedbed. Cultipacking before and after seeding is a must. Can be no tilled or seeded conventionally.
