

SOY SUPREME

A COVER CROP MIX TO PREPARE THE SOIL FOR SOYBEANS

Soybeans are not the most competitive plants, and this cover crop mix was designed with this in mind. Cereal Rye, Triticale, and the Winter Oat provide aggressive growth from planting until termination, leaving behind a mat that weeds struggle to penetrate. Soybeans can fix their own nitrogen, so no legumes are necessary in this mix. The daikon radish will aerate soil, address soil compaction issues, and make nutrients soybeans love available right in the root zone.

At A Glance

- A versatile winter annual cover crop or forage mix with soil health benefits.
- Improves soil quality and sets the stage for a soybean crop
- Can be grazed in fall or spring with timely planting.
- Can be used for a wildlife food plot

Product Formula

Triticale- 40%
Cereal Rye- 30%
Winter Oat- 28%
Daikon Radish- 2%

Best Uses

Cover crop, grazing, haylage, baleage

Establishment

Seeding Rate: 100 lb/A
Seeding Depth: 3/4" - 1"
Large box Seeding Dates: Early fall (about 1 month before wheat planting dates)
