

# WARM DIVERSITY MIX

Designed with soil health in mind, the Warm Diversity Mix is a multi-layered cover crop that provides quick ground cover, aggressive root development and diverse forage. The buckwheat and millet jump out of the ground and provide quick cover while the crabgrass and bermudagrass develop in the understory. The annual lespedeza in the mix is a fast starting warm season legume that fixes nitrogen and provides high protein browse.

Noted for its fast start, Warm Diversity Mix provides complete season cover by holding the ground while the crabgrass and bermudagrass develop. Late season expect to see the crabgrass and bermuda grass flourish.

Suitable for short and long term cover, habitat and forage.

## At A Glance

- Suitable for short and long term cover
- Suitable for habitat and forage.

## Product Formula (by weight)

47.5% Millet  
20% Buckwheat  
15% Bermudagrass  
10% Annual Lespedeza  
7.5% Crabgrass
